

CORPORATE TRAINING PROGRAMME

Artificial Intelligence (AI) for Workplace Productivity & Business Transformation

Trainer: Dr. Fakhru Syahmi | Data Consultant & Certified AI Trainer

mufasyahcons@gmail.com | Full-Day Corporate Training

FAKHRUL SYAHMI

Data Consultant &
Certified AI Trainer

mufasyahcons@gmail.com

Professional Profile

Role

Data Science & Analytics Consultant

Academic

Master of Data Science | Bachelor of Economics

Sectors

Government, MNC, Universities, Corporate Organisations

Specialisation

Power BI, Excel, AI Tools, Machine Learning, Copilot

Approach

Practical, hands-on training with real business scenarios

Training Agenda Overview

SECTION 1

Introduction to AI

SECTION 2

Generative AI Fundamentals

SECTION 3

Popular AI Tools

SECTION 4

AI for Office Productivity

SECTION 5

AI for Data Analytics & BI

SECTION 6

AI Automation & Workflows

SECTION 7

AI Across Industries

SECTION 8

AI Risks, Governance & Ethics

SECTION 9

Hands-On Activities

SECTION 10

Future of AI

SECTION 11

Closing & Q&A

Learning Objectives

By the end of this training, you will be able to:

- ✓ Understand core AI concepts, terminology, and the AI landscape
- ✓ Explore generative AI and how large language models (LLMs) work
- ✓ Apply AI tools to boost daily office productivity and automation
- ✓ Use AI for data analytics, reporting, and business intelligence
- ✓ Design AI-powered workflows and process automations
- ✓ Navigate AI risks, ethics, data privacy, and governance frameworks
- ✓ Build confidence integrating AI into your professional role

SECTION 1

Introduction to Artificial Intelligence

Foundations, Concepts & Evolution

What is Artificial Intelligence?

Definition

Artificial Intelligence (AI) is the simulation of human intelligence processes by machines — especially computer systems — enabling them to learn, reason, problem-solve, perceive, and understand language.

Key AI Capabilities:

-  Learning from data patterns
-  Understanding natural language
-  Recognising images & objects
-  Predicting outcomes & trends
-  Automating repetitive tasks

AI in Your Daily Life

Netflix Recommendations

Suggests shows based on your watch history

Waze & Google Maps

Predicts traffic and finds fastest routes

Siri / Google Assistant

Answers questions using natural language

Banking Fraud Detection

Spots unusual transactions in real-time

Gmail Smart Reply

Suggests email responses automatically

Evolution of AI — From Concept to Reality

1950s

Birth of AI

Alan Turing proposes the 'Turing Test'. AI research begins at universities.

1980s

Expert Systems

Rule-based AI helps businesses with decision-making. IBM Deep Blue chess.

2000s

Machine Learning

Statistical models learn from data. Google search, spam filters emerge.

2012

Deep Learning

Neural networks revolutionise image recognition. AlexNet breakthrough.

2017

Transformer Models

Google's 'Attention is All You Need' paper — foundation of modern LLMs.

2020

GPT-3 & Foundation Models

Large language models capable of human-like text generation arrive.

2023

ChatGPT Era

AI becomes mainstream. 100M users in 2 months. AI enters every industry.

2025+

AI Agents & Physical AI

Autonomous agents, robotics, multimodal AI. AI becomes infrastructure.

Types of AI — The Intelligence Spectrum

Narrow AI (ANI)

Artificial Narrow Intelligence

Designed for ONE specific task. The AI you use every day — ChatGPT, Siri, Spotify, recommendation engines, fraud detection.

Examples:

ChatGPT, Waze, Netflix

TODAY — Available Now

General AI (AGI)

Artificial General Intelligence

AI that can perform ANY intellectual task that a human can. Can reason, learn, and adapt across domains without retraining.

Examples:

Theoretical / In Research

NEAR FUTURE — In Development

Super AI (ASI)

Artificial Superintelligence

AI that surpasses human intelligence in all domains. Hypothetical at this stage — but discussed heavily in AI safety research.

Examples:

Hypothetical — Not Yet

FUTURE — Theoretical

The AI Path — From Perception to Physical AI

Perception AI

AI that senses and interprets the world — image recognition, speech-to-text, computer vision, facial recognition.

Language AI

AI that understands and generates human language — NLP, translation, summarisation, chatbots, LLMs.

Reasoning AI

AI that thinks, plans, and makes decisions — logic engines, recommendation systems, strategic planning AI.

Generative AI

AI that creates — text, images, code, video, music, synthetic data. GPT-4, DALL-E, Sora, Gemini.

Agentic AI

AI that takes autonomous multi-step actions — browses web, runs code, sends emails, books meetings. AI Agents.

Physical AI

AI embedded in the physical world — robotics, autonomous vehicles, smart factories, drones, surgical robots.

The AI Evolution Path: Sensing → Understanding → Reasoning → Creating → Acting → Embodying

Types of AI Models — LLM, LAM, MLLM & Beyond

LLM

Large Language Model

Trained on massive text datasets to understand and generate human language. The brain behind ChatGPT, Copilot, Gemini, Claude.

e.g. GPT-4, Claude 3, Gemini, Llama 3

MLLM

Multimodal Large Language Model

Can process and generate across multiple modalities — text, images, audio, video, and code simultaneously.

e.g. GPT-4o, Gemini Ultra, Claude 3 Opus

LAM

Large Action Model

Goes beyond language to take real-world actions — clicking, navigating, operating software, executing workflows autonomously.

e.g. Rabbit R1, Claude Computer Use

SLM

Small Language Model

Compact, efficient AI models that run on devices. Lower cost, faster inference, privacy-first design for edge computing.

e.g. Phi-3, Gemma, Mistral 7B

VLM

Vision Language Model

Specialised in understanding visual content and describing or answering questions about images and video frames.

e.g. LLaVA, Flamingo, BLIP-2

FM

Foundation Model

Massive pre-trained base models that can be fine-tuned for multiple downstream tasks across industries and domains.

e.g. GPT-4, BERT, T5, Stable Diffusion

ML vs Deep Learning vs Generative AI

Machine Learning (ML)

Algorithms that learn patterns from structured data to make predictions or decisions without being explicitly programmed.

How it works:

Trains on labelled data → Identifies patterns → Makes predictions

Use Cases:

Forecasting, classification, anomaly detection

Spam filters, credit scoring, disease prediction

Deep Learning (DL)

A subset of ML using multi-layered neural networks inspired by the human brain. Excels at unstructured data like images and speech.

How it works:

Input layer → Hidden layers (neurons) → Output prediction

Use Cases:

Computer vision, NLP, speech recognition

Facial recognition, object detection, voice assistants

Generative AI (GenAI)

AI that generates new, original content — text, images, code, video, audio — based on patterns learned from training data.

How it works:

Prompt input → Foundation model → Creative output

Use Cases:

Content creation, coding, design, summarisation

ChatGPT, DALL-E, Midjourney, GitHub Copilot

SECTION 2

Generative AI Fundamentals

How LLMs Work, Prompting & Responsible AI

What is Generative AI?

Generative AI Definition

Generative AI refers to AI systems that can produce new, original content — including text, images, audio, video, code, and synthetic data — by learning statistical patterns from massive training datasets.

Unlike traditional AI that classifies or predicts, Generative AI CREATES.

What can Generative AI create?

-  Articles, emails, reports, summaries
-  Code in any programming language
-  Images, illustrations, logos, designs
-  Music, audio, voiceovers
-  Videos and animations
-  Synthetic data for training

GenAI Tool Categories

Text Generation

ChatGPT, Claude, Gemini, Copilot

Image Creation

DALL-E, Midjourney, Firefly

Code Generation

GitHub Copilot, Cursor, Tabnine

Video Generation

Sora, Runway ML, Pika Labs

Audio & Voice

ElevenLabs, Whisper, Suno

Presentation

Gamma, Canva AI, Beautiful.ai

How Large Language Models (LLMs) Work

1. Training Data

Billions of web pages, books, code, articles

2. Tokenisation

Text is broken into tokens
(words/subwords)

3. Neural Network

Transformer architecture — learns
attention patterns

4. Pre-training

Learns language patterns, facts, reasoning

5. Fine-tuning

RLHF — aligned to be helpful, harmless,
honest

6. Inference

Your prompt → model generates token by
token

⚡ **Key Insight:** LLMs don't retrieve stored answers — they **GENERATE** responses by predicting the most statistically likely continuation of your input (prompt).

Prompt Engineering — The Art of Talking to AI

A prompt is the instruction or question you give to an AI. Better prompts = dramatically better results.

R	Role Tell the AI WHO it is	<i>'You are an expert HR manager...'</i>
T	Task Define WHAT you want	<i>'Write a performance review for...'</i>
F	Format Specify OUTPUT format	<i>'In bullet points, max 200 words'</i>
C	Context Provide BACKGROUND info	<i>'The employee has been with us for 2 years...'</i>
E	Examples Give SAMPLE outputs	<i>'Here's an example of the style I want...'</i>

Good Prompt vs Bad Prompt — Real Examples

Example 1: Report Writing

Write a report

You are a business analyst. Write a 2-page executive summary report on Q3 sales performance, highlighting top 3 issues and recommendations. Use bullet points. Audience: senior management.

Example 2: Presentation

Make a presentation

Create a 10-slide PowerPoint outline for a training session on AI tools for non-technical staff. Include: objectives, tool overview, hands-on demo plan, and takeaways.

Example 3: Translation

Translate this

Translate the following customer complaint email from English to Bahasa Malaysia. Maintain a professional and empathetic tone. Keep technical terms in English.

AI Limitations, Ethics & Responsible Usage

Hallucinations

AI can confidently state incorrect facts. Always verify claims, especially statistics, dates, and names.

Data Privacy Risk

Never enter sensitive personal, financial, or confidential company data into public AI tools.

Knowledge Cutoff

LLMs have a training cutoff date and don't know about recent events unless given internet access.

Copyright Concerns

AI-generated content may resemble copyrighted material. Check organisational IP policies.

Bias in Outputs

AI reflects biases present in training data. Can produce biased, stereotyped, or culturally insensitive content.

Over-Reliance Risk

Blindly trusting AI outputs can lead to poor decisions. Maintain critical thinking at all times.

No Real Understanding

AI processes patterns, not true comprehension. It can produce plausible-sounding but meaningless content.

Responsible AI Use

Follow your organisation's AI usage policy. Disclose AI assistance where required. Be transparent.

SECTION 3

Popular AI Tools for Workplace Productivity

ChatGPT · Copilot · Gemini · Claude & More

AI Tools Landscape — Your Productivity Arsenal

ChatGPT

OpenAI

General writing, coding, analysis, brainstorming

Microsoft Copilot

Microsoft

Office productivity: Word, Excel, Outlook, Teams

Google Gemini

Google

Research, Gmail, Docs, Sheets integration

Claude AI

Anthropic

Long documents, analysis, safe AI assistance

Perplexity AI

Perplexity

AI-powered research with real-time web citations

Canva AI

Canva

Design generation, presentations, social media

Notion AI

Notion

Notes, knowledge management, documentation AI

Grammarly AI

Grammarly

Grammar correction, tone adjustment, writing clarity

ChatGPT — OpenAI's Flagship AI Assistant

ChatGPT Overview

ChatGPT by OpenAI is the world's most widely used AI assistant. It can generate human-quality text, answer questions, write and debug code, analyse data, translate languages, and engage in extended conversations.

Key Versions:

- **GPT-3.5** Free tier, fast responses, basic tasks
- **GPT-4o** Advanced multimodal, vision, coding
- **GPT-4o Mini** Faster, cost-efficient version
- **ChatGPT Enterprise** Custom knowledge, data security

Workplace Use Cases

-  Write & edit emails, memos, reports
-  Analyse data and explain findings
-  Write and debug code
-  Translate documents
-  Create SOPs, policies, meeting agendas
-  Brainstorm ideas and strategies
-  Summarise long documents and contracts
-  Research and Q&A on any topic

Sample Prompt: "You are an HR executive. Write a professional email to all staff announcing a mandatory AI training session next Monday at 9AM. Keep it concise and encouraging."

Microsoft Copilot — AI Built Into Your Office

Word Copilot

Draft documents, rewrite sections, summarise long reports, change tone

'Summarise this 20-page policy document in 5 key points'

Excel Copilot

Analyse data with natural language, create formulas, generate charts, spot trends

'Show me which products had the highest growth in Q3'

Outlook Copilot

Draft email replies, summarise long email threads, schedule meetings

'Draft a reply declining this meeting but proposing an alternative'

Teams Copilot

Transcribe meetings, generate action points, catch up on missed conversations

'What decisions were made in today's meeting?'

PowerPoint Copilot

Generate slide decks from prompts, redesign layouts, add speaker notes

'Create a 10-slide presentation on our Q4 strategy'

OneNote Copilot

Summarise notes, extract action items, generate content from meeting notes

'Turn these raw notes into a structured project brief'

AI Tools Comparison — Choosing the Right Tool

Tool	Best For	Free Tier	MS 365 Integration	Best Sector
ChatGPT	Writing, coding, general tasks	✓ Yes	⚠ Limited	All sectors
Microsoft Copilot	Office productivity, meetings	✓ Basic	✓ Full	Corporate/Govt
Google Gemini	Research, Google Workspace	✓ Yes	⚠ Google only	Education/Research
Claude AI	Long documents, analysis	✓ Yes	⚠ Limited	Legal/Finance
Perplexity AI	Research with citations	✓ Yes	✗ None	Research/Academia
Canva AI	Design & presentations	✓ Yes	⚠ Limited	Marketing/HR
Notion AI	Knowledge management	⚠ Paid add-on	✗ None	Tech/Startups
Grammarly AI	Writing quality & clarity	✓ Yes	✓ Word plugin	All sectors

💡 *Tip: Microsoft Copilot is the top choice for corporate and government sectors already using Microsoft 365. ChatGPT excels for general creative and analytical tasks.*

SECTION 4

AI for Office Productivity

Email · Reports · Meetings · Documents & More

AI-Powered Office Workflow — How It Works

Your data, task, or question

Clear instruction to the AI

Model generates response

Draft content or analysis

Validate, edit, approve

Polished, ready-to-use result

Email Writing

Draft professional emails in seconds. Adjust tone: formal, friendly, persuasive.

Report Generation

Turn raw data and notes into structured executive reports.

Meeting Summaries

Transcribe and summarise meetings with key decisions and action items.

Data Analysis

Describe your data in plain English — AI writes the formula or chart.

SOP Creation

Generate step-by-step standard operating procedures from process descriptions.

Research & Knowledge

Rapid research on any topic. Summarise lengthy documents or policies.

AI for Email Writing & Report Generation

Professional Email — Client Follow-Up

Prompt:

Write a polite follow-up email to a client who hasn't responded to our proposal sent 5 days ago. Keep it professional and offer to answer any questions.

AI Output:

Subject: Following Up on Our Proposal

Dear [Client Name],

I hope this email finds you well. I wanted to follow up on the proposal we sent last week regarding [project]...

Internal Memo — Policy Update

Prompt:

Write a staff memo announcing a new remote working policy allowing 2 days WFH per week, effective next month. Tone: positive and encouraging.

AI Output:

TO: All Staff
FROM: HR Department
RE: New Remote Working Policy

We are pleased to announce an exciting update to our workplace policy...

Executive Report — Monthly KPI

Prompt:

Generate an executive summary for a monthly HR report showing 92% attendance, 3 new hires, 2 resignations, and 4 training sessions conducted.

AI Output:

HR MONTHLY REPORT — EXECUTIVE SUMMARY

Key Highlights:

- Attendance Rate: 92% (above 90% target)
- Headcount Changes: +3 hires, -2 resignations...

SECTION 5

AI for Data Analytics & Business Intelligence

Excel · Power BI · Forecasting · Dashboards

AI-Powered Data Analytics — From Data to Decisions

1. Data Collection

AI Role:

AI tools automate data gathering, API connections, and web scraping

2. Data Cleaning

AI Role:

Copilot & ChatGPT identify inconsistencies, fill gaps, standardise formats

3. Exploratory Analysis

AI Role:

AI surfaces patterns, anomalies, and distributions in natural language

4. Visualisation

AI Role:

Power BI Copilot and ChatGPT generate charts and dashboards from prompts

5. Insights & Narration

AI Role:

AI explains what the data means and generates executive summaries

6. Forecasting

AI Role:

AI applies time-series models to predict future trends and KPIs

AI in Excel & Power BI — Smart Analytics Tools

AI in Microsoft Excel

Copilot for Excel

Analyse tables, generate formulas, create charts from natural language prompts

Ideas Feature

Automatically surfaces patterns and insights from selected data ranges

Forecast Sheet

One-click forecasting using exponential smoothing on time-series data

ChatGPT + Excel

Use ChatGPT to write complex formulas, explain errors, clean data

LAMBDA + AI

Build AI-assisted custom functions for advanced analytics workflows

AI in Power BI

Copilot for Power BI

Generate reports, write DAX measures, and create visuals from text prompts

Q&A Visual

Ask data questions in plain English — Power BI returns instant visuals

Smart Narratives

Auto-generated text summaries that explain what's in your charts

Key Influencers

AI identifies factors most significantly impacting your business metrics

Anomaly Detection

Automatically flags unusual data points and trend deviations

SECTION 6

AI Automation & Workflow Automation

Power Automate · AI Agents · Process Automation

What is AI Automation? — Beyond Simple Macros

AI Automation = Intelligent process execution without human intervention at every step

HR Onboarding Automation

New employee email received

- AI extracts employee details
- Creates accounts in all systems
- Sends welcome email with guides
- Notifies IT and manager

Invoice Processing Automation

Invoice PDF received via email

- AI reads invoice with OCR
- Validates against PO system
- Routes to approver if over RM5,000
- Logs to accounting system

Customer Support Automation

Customer submits support ticket

- AI classifies issue category
- Drafts suggested resolution
- Escalates complex cases to human
- Sends confirmation email

SECTION 7

AI Across Industries

Finance · Healthcare · Education · Government & More

AI Transformation Across Industries

Finance & Banking

AI Applications:

Fraud detection, credit scoring, algorithmic trading, robo-advisors, loan processing

Reduced risk, faster decisions, 24/7 service

Healthcare

AI Applications:

Diagnosis assistance, medical imaging analysis, drug discovery, patient monitoring

Earlier detection, better outcomes, reduced costs

Education

AI Applications:

Personalised learning paths, automated grading, AI tutors, curriculum design

Student engagement, scale, accessibility

Government

AI Applications:

Document processing, citizen service chatbots, fraud detection, policy analysis

Efficiency, transparency, faster service delivery

Marketing

AI Applications:

Content generation, personalisation, A/B testing, customer segmentation, SEO

Higher ROI, personalised campaigns, scale

HR & People

AI Applications:

Resume screening, onboarding automation, performance analytics, engagement surveys

Faster hiring, reduced bias, better retention

SECTION 8

AI Risks, Governance & Ethics

Responsible AI Usage in the Workplace

AI Governance Framework — Using AI Responsibly

Transparency

Disclose when AI was used to generate content. Be clear about AI's role in decisions.

Accountability

Humans remain responsible for all AI-assisted outputs. AI doesn't absolve you of responsibility.

Fairness & Bias

Regularly audit AI outputs for bias. Ensure AI doesn't discriminate against groups.

Privacy & Security

Never input confidential or personal data into public AI tools. Use enterprise-grade tools.

Human Oversight

Critical decisions — hiring, medical, legal, financial — must involve human judgement.

Continuous Review

AI policies must evolve with technology. Regular review, training, and updates required.

Data Privacy & Security — Protecting Sensitive Information

 **GOLDEN RULE: NEVER enter confidential, personal, or classified data into public AI tools**

DO NOT Share with Public AI

- Employee personal data (IC numbers, salaries, medical records)
- Customer personal information (names, contacts, financial data)
- Confidential business strategies, M&A plans, financial projections
- Classified government information or state secrets
- Proprietary source code, trade secrets, or intellectual property
- Legal documents under attorney-client privilege

Safe Practices to Follow

- Use Microsoft Copilot (Microsoft 365) — data stays in your tenant
- Use enterprise AI tools with data processing agreements (DPA)
- Anonymise data before using AI (remove names, IDs, locations)
- Check your organisation's AI acceptable use policy
- Use private/local AI models for sensitive analysis (on-premise)
- Report any accidental data exposure to your IT/security team

SECTION 9

Hands-On Activities & Workshops

Learn by Doing — Practical AI Exercises

Activity 1 — Prompt Writing Challenge

 Duration: 15 minutes |  Group Activity (3-4 per team) |  Tool: ChatGPT / Copilot

Objective:

Write the most effective prompt for your assigned business scenario. Compare outputs with other teams.

Team A Write a comprehensive HR leave policy for a 500-person organisation covering all types of leave.

Team B Create a professional sales email sequence (3 emails) to follow up on a product demo to a prospective client.

Team C Draft a project status update report for senior management on a delayed IT system migration project.

Team D Generate 10 innovative ideas for improving customer experience at a government service counter.

Discussion: What made the best prompts effective? What would you improve?

Activity 2 — AI Workflow Design Workshop

 Duration: 20 minutes |  Department Groups |  Output: Simple Process Flow Diagram

Instructions:

1. Identify ONE manual or time-consuming process in your current workflow
2. Map out the current steps (as-is process) — write them on paper or whiteboard
3. For each step, ask: 'Can AI help here? How?'
4. Design the future (to-be) workflow with AI integration
5. Estimate time savings and business benefit
6. Present your workflow design to the group (2 minutes each)

Process Template: Manual Step → AI Tool → AI Output → Human Review → Result

SECTION 10

Future of AI

Trends, Careers & Building AI-Ready Organisations

Future AI Trends — What's Coming Next

AI Agents & Autonomous Systems

AI that can independently plan, decide, and execute multi-step tasks. From copilots to autopilots.

 2025-2026

Multimodal AI

AI seamlessly handling text, images, audio, video, and code simultaneously in single models.

 Here now

Edge AI & Device AI

AI processing happening on-device — smartphones, laptops, IoT — for privacy and speed.

 2025-2027

AI-Native Applications

Software built around AI from the ground up — not AI features added on top of existing apps.

 2025-2028

Physical AI & Robotics

AI moving into the physical world — humanoid robots, autonomous vehicles, smart manufacturing.

 2026-2030

Personalised AI Assistants

AI that knows your preferences, work style, and history — becoming your personal chief of staff.

 2025-2026

AI & the Future of Work — Human + AI Collaboration

The question is not 'Will AI take my job?' — it's 'How do I work with AI to become irreplaceable?'

Skills for the AI Era

AI Prompt Engineering

Craft effective prompts to get optimal AI outputs

Critical AI Evaluation

Verify, fact-check, and improve AI-generated content

Data Literacy

Understand data quality, bias, and statistical basics

Human-AI Collaboration

Know when to use AI and when human judgement is essential

AI Tool Proficiency

Hands-on fluency with 3-5 AI tools in your domain

Ethical AI Thinking

Apply responsible AI principles in daily decision-making

AI Adoption Roadmap

PHASE 1

Aware (Now)

Learn AI basics. Try 2-3 tools. Follow AI news.

PHASE 2

Apply (1-3 months)

Use AI daily. Build prompt templates. Track time saved.

PHASE 3

Integrate (3-6 months)

AI into workflows. Train colleagues. Build AI SOPs.

PHASE 4

Lead (6-12 months)

Champion AI in your team. Propose automation projects.

SECTION 11

Closing, Key Takeaways & Q&A

Summary · Recommendations · Next Steps

Key Takeaways — Your AI Toolkit from Today

01

AI is not magic — it's a tool. Like any tool, it requires skill, practice, and critical thinking to use effectively.

02

Prompt quality determines output quality. Invest time in writing clear, specific, contextual prompts using the RTFCE framework.

03

AI amplifies human capability — it doesn't replace human judgement. Always validate, review, and take responsibility for AI outputs.

04

Data privacy is non-negotiable. Never enter confidential or personal data into public AI tools. Use enterprise-grade solutions.

05

Start small, then scale. Pick ONE use case this week. Build confidence before expanding AI into complex workflows.

06

The AI landscape moves fast. Commit to continuous learning. Follow AI news, experiment with new tools, share learnings with your team.

Best Practices & Common AI Mistakes to Avoid

✓ Best Practices

- ✓ Always review and validate AI outputs before use
- ✓ Be specific in prompts — include role, task, format, context
- ✓ Start with low-risk tasks to build confidence
- ✓ Keep humans in the loop for critical decisions
- ✓ Experiment and iterate — refine your prompts
- ✓ Use AI to augment your thinking, not replace it
- ✓ Stay updated with new tools and capabilities
- ✓ Share AI wins with your team to build culture

✗ Common Mistakes to Avoid

- ! Accepting AI output without verification
- ! Sharing confidential data with public AI tools
- ! Using vague, generic prompts
- ! Relying on AI for real-time or cutting-edge information
- ! Treating AI as infallible or authoritative
- ! Using AI to make final decisions without review
- ! Ignoring AI governance and ethics policies
- ! Not disclosing AI use when required to do so

Questions & Discussion

Now is your chance — ask anything about AI tools, applications, governance, or how to get started in your specific role.

Dr. Fakhruul Syahmi | mufasyahcons@gmail.com

Thank You!

It was a pleasure training with you. Keep experimenting, keep learning, and remember — the best AI user is a curious, critical, and creative human being.
